

Technical visit to HAIZEA WIND

Friday 20th June 2025

Founded in 2018 in the Port of Bilbao, **Haizea Bilbao** is a company dedicated to the manufacture and assembly of large metal structures for offshore wind turbines, such as wind towers, monopiles or primary steel for transition pieces. It has direct and preferential access to a mooring line 800m long with a depth of 21m, allowing optimised logistics for both incoming and outgoing materials. The factory has been designed to cover the current and future dimensions of the offshore components, with diameters of up to 11m. In addition, the plant has a layout designed to achieve production efficiency, being the factory with the largest capacity in Europe.

Innovation and sustainability

Haizea Wind Group is aligned with the global objectives of sustainability and energy transition:

- Commitment to energy efficiency in its manufacturing processes.
- Development of advanced solutions for larger and more powerful wind turbines, which are key to increasing the efficiency of wind farms.

Market and customers

Haizea Wind Group is made up of Haizea Bilbao, Haizea Tecnoaranda, Haizea Grupo WEC, Haizea Sica and Haizea Breizh. In February 2018, the joint venture between Haizea Wind Group and SICA Metalúrgica was formalised, creating Haizea Sica, a company located in Santa Fe (Argentina) and dedicated to the manufacture of onshore towers.

The company works closely with leading wind turbine manufacturers and wind project developers, such as Vestas, GE Renewable Energy, Siemens Gamesa Renewable Energy, Nordex-Acciona, Saipem and Renexia, among others.

Maximum 40 people, free for registered MESIC attendees. It is required to book in the registration process. Confirmation and details 1 month before.
